

3-Axis PTZ USB Joystick

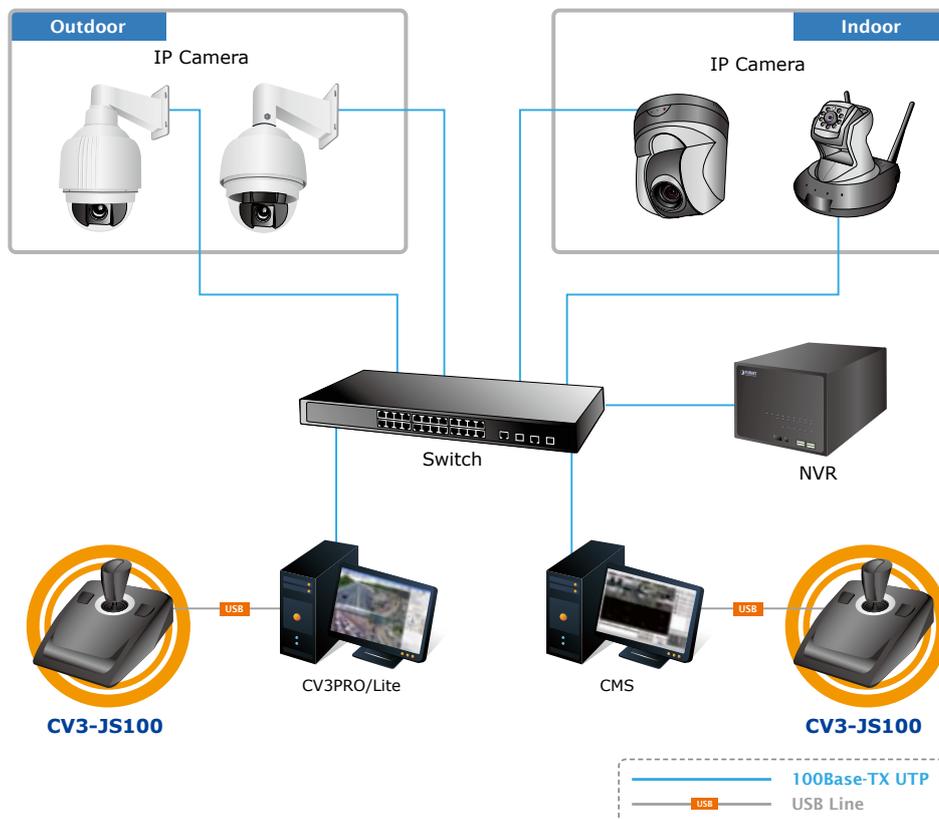

To bring users a more convenient way to management the PTZ IP camera other than using mouse click, PLANET introduces the CV3-JS100, a 3-Axis Control Joystick to offer easy control of PTZ IP camera including upward, downward, leftward, rightward, clockwise and counterclockwise control. By the CV3-JS100 integrating with PLANET video surveillance management software (CV3P & CV3L) and Network Video Recorder (NVR-401, NVR-810 and NVR-1610), the administrator can easily control and manage the IP camera even it is far away. Just connect the joystick CV3-JS100 to the USB port on your computer and/or the NVR, the joystick is automatically detected and then you can immediately start the handy control of the PTZ IP camera.

KEY FEATURES

- 3-Axis PTZ joystick control
- USB interface convenient for computer and the NVR connection
- One time setting with memory of setting map in the specific used computer and the NVR
- Choice of button configurations
- Cable connector in the back side helps to prevent cable from being plugged out
